EXPERIENCE

Full-Stack Software Engineer

DMSi Software

Oct 2024 – Present

Woodbury, MN

- Led the architectural rewrite of legacy VB.NET applications to a modern React, .NET, and PostgreSQL stack.
- Architected secure RESTful APIs, integrated cloud storage buckets, and implemented Model Context Protocol (MCP) servers.
- Authored comprehensive Agile/Scrum Jira tickets for sprint deliverables.
- Built automated CI/CD pipelines, eliminating ~40 team hrs/week of manual testing and multi-environment deployments.
- Managed internal application servers (Linux & Windows) to ensure high availability and continuous uptime.

Software Engineering Intern

DMSi Software

March 2024 – Oct 2024

Woodbury, MN

- Engineered critical order entry features to optimize transaction workflows.
- Developed comprehensive logging and audit systems to improve application observability and troubleshooting capabilities.
- Automated complex ETL workflows and built internal data management tooling using Python and SQL.

Software Engineering Intern

4Human (Charity Project)

Dec 2023 – March 2024

Remote

- Built a full-stack e-commerce platform for an African charity using React and Express.js.
- Architected scalable backend infrastructure leveraging AWS S3, alongside managed SQL and NoSQL databases.

Network Operation Specialist

TransCore

Oct 2023 – Jan 2024

Orlando, FL

- Monitored Linux and Windows production servers, ensuring system uptime and reliability.
- Coordinated field technician dispatch and resolved hardware / software issues.
- Diagnosed and escalated complex problems with detailed documentation.
- Maintained comprehensive call logs and system performance records.

Technical Support Specialist & Advisor

BYU-Pathway Worldwide

Aug 2021 – Sep 2022

Remote

- Automated student curriculum extraction with Python, reducing manual analysis time by over 90%.
- Collaborated with development teams to troubleshoot semester planning software and resolve core system bugs.

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, C# (.NET), C++, SQL

Frameworks and Tools: React, Node.js, Docker, PostgreSQL, GitHub Actions, Git, Linux

Concepts: RESTful APIs, CI/CD, Agile/Scrum, API Security, Version Control, AI-Assisted Development

EDUCATION

Bachelor of Science in Software Engineering

Brigham Young University - Idaho

Sept. 2019 - Dec. 2023

- Relevant Coursework: Software Engineering Principles, Design Patterns, Data Structures, and Algorithms (C++),
- App Development (Python), Web Development (JavaScript).

PROJECTS

EFStudio: Local browser-based workbench for EF Core apps. Installs as a .NET global tool and runs inside your project directory. Auto-discovers database context. (github.com/Calesi19/EFStudio)

Apollo Simulation : C++ simulation of a lunar lander, employing the principles of Newtonian physics for maneuvering. (github.com/Calesi19/Apollo-Simulation)
